Pricing calculator (sheet)

01 / Understand the task

A rate model that accounts for admin, revisions and the work you did not quote.

Estimate the complete effort of one small project before discussing a price.

Choose one small, real example to work on. A focused attempt gives you better evidence than a general impression.

Your example: _____

Your audience: _____

Your intended outcome: _____

One constraint: _____

Pricing calculator (sheet)

02 / Put a method to work

1. Choose a target hourly rate for this illustrative exercise.

2. Estimate hands-on project hours, not just the final presentation.

3. Add administration, communication and agreed revision hours.

4. Multiply total hours by the rate, before expenses and taxes.

5. State scope, assumptions and what would trigger a revised estimate.

6. Compare the estimate with actual time after the project.

Working notes: _____

_____

Pricing calculator (sheet)

03 / A worked practice scenario

Example: $35 per hour, 12 project hours, 2 admin hours and 2 revision hours.

Total: 16 hours. Illustrative estimate: $560, before tax and expenses.

The resource page has a working local calculator and an editable spreadsheet CSV. Neither is financial advice.

Apply the method to your own example. What changes?

Your first attempt: _____

Your revision: _____

Pricing calculator (sheet)

04 / Reflect and keep going

Have you accounted for the work around the work, and made the assumptions visible?

What is clearer after using this workbook?

_____

What evidence supports that conclusion?

_____

What is the smallest useful next step?

_____

Feedback prompt: "I noticed ____. That helped / made it harder to ____. One thing to try is ____."

You may adapt this original sample workbook for personal learning and classroom demonstrations.
