Design token starter kit

01 / Understand the task

A small JSON token structure and a decision checklist for consistent interface patterns.

Give repeated interface decisions a shared name, a value and a reason for existing.

Choose one small, real example to work on. A focused attempt gives you better evidence than a general impression.

Your example: _____

Your audience: _____

Your intended outcome: _____

One constraint: _____

Design token starter kit

02 / Put a method to work

1. Inventory three repeated decisions: ink colour, spacing and corner radius.

2. Use semantic names such as color.ink rather than blue-1.

3. Record a value, type and short purpose for each token.

4. Keep component aliases separate from the underlying palette.

5. Test the values in a button, a field and a readable paragraph.

6. Document how a token changes across light and dark surfaces.

Working notes: _____

_____

Design token starter kit

03 / A worked practice scenario

Example token: color.ink = #012A5D, used for readable text on light surfaces.

Example spacing scale: space.1 = 4px, space.2 = 8px, space.3 = 12px, space.4 = 16px.

The resource page includes an actual downloadable JSON starter. It is a sample structure, not a production build system.

Apply the method to your own example. What changes?

Your first attempt: _____

Your revision: _____

Design token starter kit

04 / Reflect and keep going

Can a teammate choose the right value from its purpose rather than its appearance?

What is clearer after using this workbook?

_____

What evidence supports that conclusion?

_____

What is the smallest useful next step?

_____

Feedback prompt: "I noticed ____. That helped / made it harder to ____. One thing to try is ____."

You may adapt this original sample workbook for personal learning and classroom demonstrations.

This is sample learning material, not legal, financial, medical or accreditation advice.
