The interface audit checklist

01 / Understand the task

Every check we run before a design review, in the order we run it.

Review one real screen by walking its primary task from a clear starting point to a useful result.

Choose one small, real example to work on. A focused attempt gives you better evidence than a general impression.

Your example: _____

Your audience: _____

Your intended outcome: _____

One constraint: _____

The interface audit checklist

02 / Put a method to work

1. Name the user, the task and the success condition.

2. Read the page heading and primary action without relying on colour.

3. Use only the keyboard: check order, focus visibility and a way back.

4. Try an empty, invalid and successful form submission.

5. Check the same task at 320px and with 200% text.

6. Record each issue as evidence, impact, suggested change and a retest.

Working notes: _____

_____

The interface audit checklist

03 / A worked practice scenario

Screen: a fictional workshop registration form. Task: find the date and reserve a place.

Evidence: the date appears only in a decorative image; a required field has no visible label. Impact: the learner cannot reliably prepare or complete the form.

Revision: add readable date/time text, persistent labels and a linked error summary. Repeat the original task with the keyboard.

Apply the method to your own example. What changes?

Your first attempt: _____

Your revision: _____

The interface audit checklist

04 / Reflect and keep going

Can another reviewer reproduce each finding from the evidence you recorded?

What is clearer after using this workbook?

_____

What evidence supports that conclusion?

_____

What is the smallest useful next step?

_____

Feedback prompt: "I noticed ____. That helped / made it harder to ____. One thing to try is ____."
