Data storytelling workbook

01 / Understand the task

Framing worksheets and a chart-choice decision tree.

Turn one small dataset into a defensible statement with an honest visual comparison.

Choose one small, real example to work on. A focused attempt gives you better evidence than a general impression.

Your example: _____

Your audience: _____

Your intended outcome: _____

One constraint: _____

Data storytelling workbook

02 / Put a method to work

1. Write the decision the reader needs to make.

2. Check units, missing values, source date and the population being described.

3. Use bars for category comparisons, a line for change over time, or a table for exact lookup.

4. Start comparable bar axes at zero and label the units.

5. Write a title that states the finding without claiming more than the data supports.

6. Add one limitation and a text alternative for the important relationship.

Working notes: _____

_____

Data storytelling workbook

03 / A worked practice scenario

Fictional attendance: January 24, February 30, March 27 learners.

A line can show the sequence; a table makes the exact values easy to find. Do not describe the series as continuous growth.

A fair summary: attendance peaked in February, then fell by three learners in March.

Apply the method to your own example. What changes?

Your first attempt: _____

Your revision: _____

Data storytelling workbook

04 / Reflect and keep going

Would the same conclusion remain fair if the reader inspected the raw numbers?

What is clearer after using this workbook?

_____

What evidence supports that conclusion?

_____

What is the smallest useful next step?

_____

Feedback prompt: "I noticed ____. That helped / made it harder to ____. One thing to try is ____."
