Type specimen generator

01 / Understand the task

Edit a local specimen and compare reading sizes, line heights and three font families.

Test a short passage at reading and display sizes before choosing a type treatment.

Choose one small, real example to work on. A focused attempt gives you better evidence than a general impression.

Your example: _____

Your audience: _____

Your intended outcome: _____

One constraint: _____

Type specimen generator

02 / Put a method to work

1. Choose a heading, a paragraph and a mixed-case sample with numbers.

2. Compare a readable body size with a larger heading size.

3. Adjust line height and measure; keep the text easy to scan.

4. Check punctuation, numerals and similar shapes such as I, l and 1.

5. Try the composition on a narrow screen and with enlarged text.

6. Print a specimen to compare rhythm without screen rendering effects.

Working notes: _____

_____

Type specimen generator

03 / A worked practice scenario

Start with body text around 16-18px and a line height around 1.6. Treat these as starting points, not universal rules.

Use the local type specimen tool to edit text and compare Lexend, a system sans and a serif fallback.

Your specimen stays in the current page. Nothing is uploaded or saved.

Apply the method to your own example. What changes?

Your first attempt: _____

Your revision: _____

Type specimen generator

04 / Reflect and keep going

Can the text be read comfortably without relying on a decorative heading treatment?

What is clearer after using this workbook?

_____

What evidence supports that conclusion?

_____

What is the smallest useful next step?

_____

Feedback prompt: "I noticed ____. That helped / made it harder to ____. One thing to try is ____."
